#### Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

#### 1 Prior art

Reference is made to the following document/s/:

D1: GB-A-1 166 989 (PHILIPS ELECTRONIC ASSOCIATED [GB]) 15 October 1969 (1969-10-15)

D2: WO 01/20641 A (KONINKL PHILIPS ELECTRONICS NV [NL]) 22 March 2001 (2001-03-22) cited in the application

#### **Inventive step**

### 2 Independent claim 1 not inventive

2.1 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 1 does not involve an inventive step in the sense of Article 33(3) PCT.

The document D1 is regarded as being the closest prior art to the subject-matter of claim 1, and discloses (the references in parentheses applying to this document) a tubular lamp (page 1, line 59 and Fig. 1) comprising:

- a lamp vessel which accommodates a light source (Fig. 1 (1)),
- a first part of the lamp vessel provided with a coating reflective of radiation emitted by the light source (page 2, line 17; Fig. 2 (4)),
- a second part of the lamp vessel being further provided with a light-absorbing coating (page 2, lines 46-47; Fig. 2 (5)).

The subject-matter of claim 1 therefore differs from this known D1 in that the light-

absorbing coating comprises pigments incorporated in a sol gel matrix.

The technical effect of this difference is that a higher adhesion of the coating to the lamp vessel is obtained and the coating resists at higher temperatures.

The problem to be solved by the present invention may therefore be regarded as how to modify the lamp of D1 in order to provide a higher adhesion of the coating to the lamp vessel and higher resistance of the coating at higher temperatures.

- 2.2 Document D2 discloses a lamp provided with a light-absorbing coating comprising pigments incorporated in a sol gel matrix (claim 1). Furthermore, it is known from D2 that this kind of coatings present a good thermal stability (page 2, lines 21-22 and 32-33). Coatings on a sol gel basis are nowadays very used because of their temperature resistivity and other advantageous features.
- 2.3 When confronted with the mentioned problem, the skilled person would realize that the use of the light-absorbing coating disclosed in D2 provides a coating, with improved adhesion properties and thermal stability. Therefore, the skilled person would apply the teachings of D2 to the embodiment in D1, and derive a lamp having all features of claim 1, without exercising an inventive step. The subject-matter of claim 1 is consequently not inventive.

# 3 Independent claim 6 not inventive

The same reasoning applies, mutatis mutandis, to the subject-matter of the corresponding independent claim 6, which therefore is also considered not inventive.

## 4 Dependent claims

Dependent claims 2-5 and 7 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of inventive step, for the following reasons:

The feature present in claims 2 and 3 are related to the coating areas and are known

# WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY (SEPARATE SHEET)

International application No.

PCT/IB2004/003501

from D1 (claim 3 and page 2, lines 34-36). Their subject-matter is therefore not inventive.

The features present in claims 4, 5 and 7 are related to a lamp cap, orientation means and a luminaire comprising the tubular lamp respectively. These are all feature which the skilled person naturally would apply according to his needs and without the exercise of inventive skill. The subject-matter of these claims is therefore not inventive either.
